- **Read:**

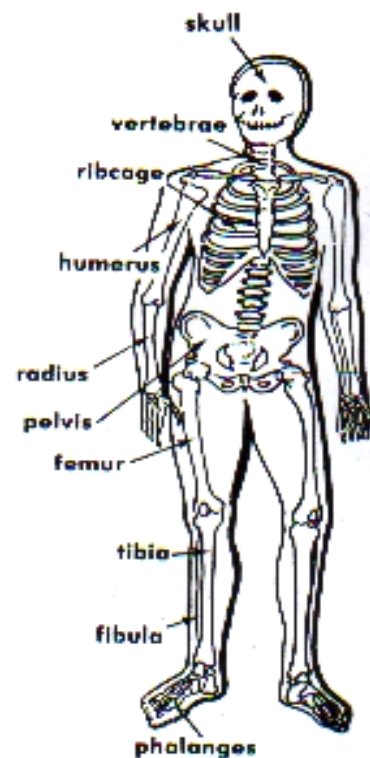

Human Skeletal System

The skeletal system consists of all the bones of the body plus the joints where the bones attach to each other. Bone and cartilage, two types of connective tissue, are the major tissues of the system. The skeletal system supports the soft tissues of the body. Its bones protect the structures enclosed by them. Bones and joints, acting as levers, work with muscles to provide movement.

Useful elements such as calcium are stored in bones.

Red blood cells are produced in the red marrow of bones.

The two main parts of the human skeleton are the axial skeleton and the appendicular skeleton.

Unfamiliar words

skeleton = the framework of bones in a human
or

animal body.

connective tissue = which joins, links, connect.

marrow = the soft substance in the hollow center of
bones

Underline the correct answer:

1- The number of bones in the human skeleton is
usually:

a- 117 b- 53 c- 206 d- 152

2- The neck bones are called:

a- thoracic vertebrae b- cervical vertebrae
c- humours d- lumbar vertebrae

3- The shoulder blade is called:

a- scapula b- ulna c- clavicle d- thigh

4- The bones of the fingers and toes are called:

a- vertebrae b- the ulna c- phalanges d- joints

5- From young adulthood to old age, the main changes in bones are:

- a- size b- importance c- function
d- texture and contour of margins and bone markings.

• Spelling:

1. What is the longest word in the dictionary?
2. What starts with T, ends with T, and is full of T?
3. What's the difference between a locomotive engineer and a schoolteacher?

• Problem solving:

Chelsea makes lemonade that costs 2 cents per cup.
She sells it at 7 cents per cup.
How much profit will she make if she sells 300 cups.

• Understanding Idioms:

Read the sentence. Choose the best meaning for the underlined words.
