

CHEBAIKI ABDELKADER HIGH SCHOOL
SECOND EXAMINATION OF ENGLISH

READING COMPREHENSION*Read the text carefully then do the activities***Can Technology Alone Improve Student Learning?**

Many experts in education have different viewpoints on this subject. The only apparent thing is the fact that technology plays and will continue to play an important role in teaching and learning. It seems that in some time it can even replace the personality of a teacher, who knows what may happen in future?

Obviously, modern people have become dependent upon technology. It develops so rapidly that it seems in a couple of years we will fly to other planets and have robots to serve and work for us. The same thing happens in the modern classrooms, which are gradually transformed into technological labs. Today, the diversity of devices appearing in the classroom are impressive. According to the statistical data, over 250 million of the US population own mobile phones and 86% of them have smart phones. Over 60% of all EU residents possess phones and about 15% of them mention to have two devices. Interestingly, a great number of those users are kids, teenagers, and students. Other interesting figures say that 56% of US students use either their laptops or desktop computers in the classroom regularly. The same number of learners wishes their instructors to use more different devices in learning. Over 50% of students have recently taken online courses and 92% of students show interest in personalized learning and online degrees. Doesn't that mean that a great shift has already taken place in education due to technology?

Though it may seem that students use technology only for fun, this viewpoint is far from being truthful. Even a simple online search and browsing the search results are beneficial for brain work, let alone hundreds of other things you can do with a laptop or mobile phone in your hands. Undoubtedly, students do not refer modern technology entirely to educational devices, but still, they agree that technology can and must be used in learning.
